Work Experience

Junior Programmer
December 2016 - Current

UNO Call Center

The following are some projects that I developed using PHP, PostgreSQL, JQuery, HTML5, CSS3 and AngularJS as technologies.

- Design and implement an API to centralize the authentication of the users between different servers. Allowing integrations between the servers with token-based applications and the facility for the users to access any application of the servers without the need of login multiple times that increase the acceptance of a new intranet implementation a 25% and reduce the time of juggling between intranet implementations a 95%.
- Design the architecture and carry out the implementation of a role-based access control application for a new intranet implementation with a level of restriction down to route actions which rise the security of the application a 75%.
- Create several applications to evaluate the performance of the administrative employees for the Department of Human Resources analyzing the key performance indicators of different periods and tracking the follow-up plans to improve the deficient KPIs.
- Redesign the architecture and create new features of a transport application for the security and accounting departments which increase the veracity of the data an 80% and boost the registration and transportation request.
- Design and implement a library to create cruds and history tables automatically which rise the time of developing basic cruds application a 70%.

Team Lead

While working as a Junior Programmer I have the opportunity to take a team lead role managing up to 3 persons. This helped me to improve my analytical thinking, architecture design skills, documentation specification knowledge and writing skills (in English). In this role I have the following responsibilities:

- Create new standards and ISO procedures for the Application Development Department with a focus in the analysis of requirements and architecture design.
- Create and participate in meetings with the stakeholders to analyze the feasibility of new projects and take in count the needs of the different persons involved.
- Begin the implementation of the Scrum methodology while teaching other coworkers the use of it. Create sprints and write requirements, user stories and the backlog of the administrative application.
- Design and implement the HMVC architecture to solve the problem of the dependency between the modules and abstract the core from the implementation in a new intranet.

Web Developer
December 2015 - December 2016

Viajes Dominicanatours

- Design a landing page for the recruitment process of the company that led to a 3% increase in the number of applicants to in two weeks with C # (ASP), Foundation and Sass.
- Implement Google API Services to provide Hotels of a rating system, which increased the reservations of hotels in a 20% with a positioning Algorithm created in Javascript with C# (ASP).-Convert PSD to front-end code and worked side by side with the graphic designers been the gate between the design team and web development team.
- Redesign the architecture of the mail system database which optimized the send of emails in an 80% creating procedures and crons with SQL Server.

Graphic Designer Internship   June 2015 - September 2015

Sewn Products Inc., (Neff)

Internship as a graphic designer where I learn how to work with international customer orders, analyze customer needs, check design specifications, color theory, eye-tracking methods.Use Adobe Illustrator and Corel Draw to create vectors of school logos, images and sports apparel. Learn about the different modes to process images for printing and web with Adobe Photoshop.

Education

Full Stack Web Development   2017 - Current

Free Code Camp

System Engineering   2011 - 2017

Universidad Tecnológica de Santiago (UTESA)

Skills

- Programming Languages: C#, PHP, Javascript.
- Database: SQLServer, PostgresSQL, MariaDB.
- Version Control Tools: Git, github, tortoise svn.
- Programming Enviorements: IIS, Laragon, Vagrant, Wamp.
- Front-End Frameworks: Bootstrap, Foundation, Materialize, MDL, AngularJS.
- Design Programs: Adobe Illustrator, Adobe Photoshop, Inkscape.
